The Clean Solution for Oxidation in Sports Nutrition

Sports nutrition products like protein powders, bars, and creams often contain essential fats that support energy and recovery. However, these fats are highly susceptible to oxidation, a process that can lead to rancidity, unpleasant flavors, and the degradation of key nutrients. As a result, the product's nutritional quality and its effectiveness in supporting athletic performance may be significantly reduced.

At Btsa, we offer NUTRABIOL[®], a range of natural antioxidants that protect sports nutrition products from oxidative damage. By preserving fats and nutrients, NUTRABIOL[®] helps maintain freshness, nutritional value, and shelf life.

Nutrabiol[®]

reliable & versatile performance

- **Preserve Nutritional Content:** Keeps proteins and healthy fats potent.
- **Extend Product Freshness:** Prevents rancidity and off-flavors.
- **Boost Performance:** Ensures full nutritional support for recovery and energy.
